Project Abstract Submission Form

Sec No-1	Team No-	Project Title- Online Rental Contract Booking & Payment System for Rental & Leasing

1.Abstract

The Online Rental Contract Booking & Payment System for Rental & Leasing is a web-based application developed to simplify and streamline the complete rental process through a centralized digital platform. Traditional rental services often depend on manual procedures, phone-based inquiries, paperwork, and separate methods for managing bookings and payments. These practices can result in limited visibility of item availability, booking conflicts, delays in contract management, and difficulties in maintaining accurate rental records.

The proposed system provides users with a convenient platform to browse rental items, view their availability, select suitable rental periods, and make bookings online. It integrates essential rental operations such as rental contract management, payment and invoicing, deposit management, return inspection, and reviews and ratings. The system also provides an administrative dashboard through which rental providers can add and manage items, monitor bookings, track payments, and maintain rental-related information efficiently.

A structured database is used to securely organize user, item, booking, contract, and payment details, while the application provides a clear and user-friendly interface for managing rental activities. By digitizing and centralizing the rental workflow, the proposed system aims to reduce manual effort, improve booking accuracy, increase transparency, and provide a more efficient and reliable rental experience for both customers and rental providers. The project follows the rental and leasing system concept specified in the provided project document.

Team Details

Roll Number(s)	Name of the Student	Signature
2520030051	Mallavarapu Bala Pranitha	
2520030500	M. Manasa	

Frameworks / Platforms / Software Used
(List the frameworks, libraries, platforms, or tools you plan to use.)

Frameworks / Platforms / Software Used

- **Frontend:** React.js
- **Backend:** Node.js, Express.js
- **Database:** MySQL
- **Authentication:** JSON Web Token (JWT)
- **Payment Integration:** Simulated Payment Processing
- **Email & Notifications:** Nodemailer

- **API Testing:** Postman
- **Development Environment:** Visual Studio Code
- **Version Control:** Git & GitHub
- **Web Browser:** Google Chrome / Microsoft Edge
- **Operating System:** Windows
